SECURITY FEATURES IN THE R1

A brief summary of all the security-related features in the R1.

PERSONAL

Behavioral Analytics
Detect an unauthorized user using the R1. Trigger an alert to the owner and organization.

Security Education
Informs the user simply about any security action taken.

Identity Verification
A flag is sent to the organization resource to signal a healthy connection from the R1 and its owner.

DEVICE

Health Scan
The R1 is capable of flagging infected devices by detecting malicious communications.

Policies
The R1 can enforce certain policies as instructed by the organization IT team.

Encyption
The R1 can be used as the key to data locked on smart devices

NETWORK

IPS/IDS
The R1 is capable of intercepting network attacks.

Robust Tiny Attack Surface
The R1 is very secure itself, and it comes with its own AV solution.

Enterprise NetSec
The R1 uses a very secure WIFI bubble that hackers can't break.

INTERNET

Threat Intelligence
The R1 and its friends around the globe are studying zero-days and hackers before they attack you.

Web Filtering
The R1 makes sure no malicious, or advertising, or background snooping web content is going through.

ADBLOCK
The R1 blocks all the annoying, and potentially harmful pop-ups, and banners etc. on a network level.
