Even worse, Mobile Connections are mostly wireless, so not only are they using WIFI on mobile devices that can't protect themselves effectively, they are joining mostly public free hotspots with a plethora of infected/malicious devices around. 25% of hotspots use no encryption, and there is 1 hotspot for every 20 humans!

**WIFI IS A SECURITY
PROBLEM, PUBLIC WIFI
IS A DISASTER**

Reporting, insights and data analytics is what you
want.

Premium security and threat intelligence is what you
need.

You get both.
